## (54) REMOTE CONTROLLER AND INFORMATION PROCESSOR

### (57) Abstract:

**PROBLEM TO BE SOLVED:** To allow one remote controller to reliably and remotely control various devices with a simple operation by providing a data recording means which acquires information necessary to the transmission of a remote control signal from a memory included in a plate-shaped recording medium and stores the information in the recording medium.

**SOLUTION:** A learning remote controller 1 acquires the information necessary to the transmission of a remote control signal, for instance, from a dedicated remote controller 2 controlling devices constituting a home network through a memory card 5 and can also remotely control the devices that become control object of the controller 2 with this. The card 5 here is a plate-shaped recording medium including a memory and can be inserted into the controller 2. Then, one remote controller can reliably and remotely control various devices with a simple operation by downloading and uploading the information necessary to the transmission of the remote control signal by using the card 5.

### LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
